DETAILED ACTION

1. Applicant's responses and amendments received July 2, 2010 and September 10, 2010 are acknowledged.

Claims 5 and 12 have been amended.

Claims 1-4, 6, and 20-25 have been canceled.

Claim 7 stands withdrawn from consideration as being drawn to a nonelected species. See 37 CFR 1.142(b) and MPEP § 821.03, for reasons of record set forth in the restriction requirement mailed August 12, 2009.

2. Applicant's response and amendments have overcome all prior grounds of rejection. Specifically, claim 12 has been amended to remove "prevention", and applicant has clearly established that anti-CD89 antibody clone A77 is well known in the art and readily available to the public well prior to the filing date of the instant application. Most importantly, independent claim 5 has been amended to require the administration of an anti-inflammatory agent which consists of a monovalent antigen binding fragment of an antibody which binds the EC2 domain of Fc α RI. The data of the instant specification, as well as the 2008 paper by Kanamaura et al. submitted with the 7/2/10 response, clearly show that a monovalent fragment, such as a Fab, without any additional binding moieties or therapeutic agents, is indeed capable of reducing inflammation in a number of clinically relevant disease model systems. This is surprising since the prior art, such as that of Hudson et al. (WO 02/064634), Shen et al. (US patent 6,018,031), van de Winkel (WO 99/41285), and Deo et al. (US2001/0014328 A1, newly cited) all disclose conjugating anti-CD89 Fab to other antibodies to make bi- or multi-specific antibodies, or conjugating toxins, other drugs, and allergen molecules to anti-CD89 Fab to treat various inflammatory diseases and disorders including cancer, allergy and asthma. Indeed, in all of these works it appears that the anti-CD89 antibody is used to target the therapeutic agent to a desired site within the patient but that it is the other conjugated moiety which brings about relief from the signs and symptoms of the disease in question. Thus, it is unexpected that the anti-CD89 monovalent antibody

Art Unit: 1644

fragment alone comprises therapeutic utility in treating inflammation. Further, it has been generally held by the courts that the omission of an element and retention of its function is an indicia of unobviousness. In re Edge, 359 F.2d 896, 149 USPQ 556 (CCPA 1966) and MPEP 2144.04 B. Therefore, the instant claimed methods have been allowed to issue. Note that the species election of a specific inflammatory disease set forth in the 8/12/09 has been withdrawn and as such claim 7 has been rejoined to the elected invention and is also allowed.

3. Claims 5, 7-19 are allowable.
